Yes, that is correct.

Thanks! Just to clarify since you mentioned 3300, I was asking specifically whether it's okay for me to make my CPE 233 OTTER repository public on GitHub, including my code from the CPE 233 labs/project and the course-provided files used by the project. (It sounds like you're okay with that, but I just wanted to make sure I understood correctly.)

Hey Rishub,

2300 and 3300 are different courses. I give closed book/note exams so I don't care. I'd rather have it out there for others to use. Thanks for asking. My only hope is that people don't try to make a profit off my work. Good luck.

Subject: Re: Question About Public GitHub Repository for CPE 233 Project

I am making a GitHub repository to document my CPE233 work to show employers. Would it be okay if I made it a public repository, or would that be a problem since current/future CPE 2300 students could access my code and other project materials?

Hey Rishub,

I'm not sure what you're asking. The courses are massively different for better or worse.

Thanks for sending this! Is the current course different enough for me to upload my repository publicly, or should I use a private link?

Hey Rishub,

Sorry for being a flake. I'll attach the stuff. Please let me know if you need anything else.

Hi Professor Mealy,

I took your CPE233 class in winter 2026 and I'm putting together a GitHub repository for my RISC-V OTTER CPU project from experiment 9G so that I can document it and link it on my resume (I am planning to use GitFront so that only potential employers with the link to the repository should be able to access it).

Do you have a copy of the lab manual (and maybe the textbook) that you can send me? I deleted mine after CPE 233, but I think it would be useful to have as a reference material.

Thank you,

Rishub
